Aim: To encourage qualified students of diverse backgrounds to develop research interests, and to pursue dissertation research, on topics relevant to the NIDA mission, especially as it pertains to understanding the neurobiological actions of drugs of abuse and the neurobiology of substance abuse.

Research areas:
- Behavioral neuroscience
- Human neuroimaging
- Medicinal chemistry
- Molecular pharmacology
- Neuropsychopharmacology

Training experience:
- Career development
- Community outreach
- Faculty/peer support
- Relevant coursework
- Sponsored seminars
